AT-14 AUTOMATIC TRANSMISSION - AUTOMATIC TRANSMISSION SYSTEM

DTC	P0722	Output Speed Sensor Circuit No Signal
-----	-------	---------------------------------------

DESCRIPTION
 The speed sensor SP2 detects the rotation speed of the transmission output shaft and sends signals to the ECM. The ECM determines the vehicle speed based on these signals. An AC voltage is generated in the speed sensor SP2 coil as the parking gear mounted on the rear planetary gear assembly rotates, and this voltage is sent to the ECM. The parking gear on the rear planetary gear is used as the timing rotor for the sensor. The gear shift point and lock-up timing are controlled by the ECM based on the signals from the vehicle speed sensor and the throttle position sensor.
